Portfolio: <https://along777.github.io/along/>

Data scientist with 5+ years building production machine learning and nearly a decade in analytics. Currently the AI lead for my team at Cigna, building end-to-end ML pipelines, developing AI agents that automate analytics workflows, and training other analysts on AI-assisted development. I pair rigorous statistical fundamentals with modern generative AI and agentic tooling to ship practical, production-minded systems.

Data Science Advisor - Cigna (Oct 2021 - Present)

Previously Business Analytics Advisor · Data Scientist (Oct 2021 - Sep 2022)

- Serve as the AI lead for my team, setting direction for how the group adopts generative AI and agentic tooling in day-to-day analytics work.
- Design and deploy end-to-end machine learning pipelines, owning data ingestion, feature engineering, model training, and delivery of results to business stakeholders.
- Develop AI agents that automate analytics workflows, as part of one of the first teams at Cigna approved to build agents.
- Lead internal training on AI-assisted development with Cursor, upskilling team members and establishing shared practices for effective and responsible use.
- Spearheaded the development of robust databases, enhancing data ingestion for Tableau dashboards, employing advanced SQL and Python scripting to streamline data flows and improve reliability.
- Led the design and deployment of multiple Tableau dashboards from scratch, significantly improving data visualization and inter-departmental communication.
- Developed statistical and machine learning models that optimized marketing strategies, including customer churn prediction and prospect targeting, increasing marketing efficiency and customer retention.

Data Scientist - Advanced Dermatology and Cosmetic Surgery (May 2021 to Oct 2021)

- Streamlined financial forecasting by developing machine learning models for patient information prediction and financial analysis, leading to improved budget accuracy and patient value extraction.
- Enhanced decision-making by creating and maintaining Power BI dashboards that presented financial metrics and insights to business leaders, driving strategic initiatives.

Research Analyst - AdventHealth: West Florida Division (April 2020 to May 2021)

- Automated and optimized departmental reporting processes using Microsoft SSRS and t-SQL, significantly reducing time spent on manual Excel tasks.
- Implemented data scraping techniques to gather competitive intelligence, directly impacting strategic planning and market positioning.

Self-Employed Stock and Cryptocurrency Trader and Programmer (May 2017 to March 2020)

- Pioneered the development of trading algorithms within the cryptocurrency market, leveraging advanced technical and financial analysis to consistently outperform market benchmarks.
- Conducted in-depth research and continuous learning to stay ahead of market trends, blockchain technology advancements, and regulatory changes, ensuring adaptive and successful trading strategies.

Marketing Data Analyst - Marrone Bio Innovations (August 2016 to May 2017)

- Contributed to product launch strategies and revenue forecasting through detailed data analysis and customer segmentation, supporting successful market entries.

TECHNICAL SKILLS

- Languages & Data: Python (pandas, NumPy, scikit-learn, statsmodels), SQL, R
- Machine Learning: End-to-end ML pipelines, XGBoost, regression & classification, feature engineering, model validation
- AI: LLMs, AI agents, retrieval-augmented generation (RAG), prompt engineering, Copilot Studio, Power Automate
- Tools & Platforms: Cursor, Git/GitHub, Jupyter, Tableau, Power BI, Microsoft Power Platform, SQL Server

EDUCATION

- University of California, Davis June 2016
B.S. in Applied Statistics and B.A in Economics – GPA 3.5
- Santa Rosa Junior College May 2014
Associate in Arts Degree (AA): Economics – GPA 3.65
